

VibraTools Suite™

University Program Overview
CLICK — DONE! www.vibratools.com

VibraTools Suite™ is the ideal software package for sound, vibration, modal, structural modification, durability and much more. The VibraTools Suite has been designed by a team of leading experts working in the field of classical software package development. Based on customer feedback, this new platform was developed enabling a more efficient and powerful approach to sound and vibration analysis. We utilize the extraordinary power and analysis capabilities of MATLAB®, the leading university software platform for matrix calculations. With the VibraTools Suite™ you will receive the following benefits:

- **MATLAB® – based** for rapid learning and very efficient teaching.
- **100% open scripts** providing a great learning experience for students.
- **Department license** Department license allows anyone connected with the respective department to have full use of the software, including faculty and students – UNLIMITED.
- **University license** allows **all** departments to have full access to the software.

The Axiom way re-establishes an educational value of teaching students how to think. With VibraTools™, there are endless possibilities to explore new ways of analyzing data without the frustrations that closed software packages present to an inquiring mind.

The Axiom way

for a department license,
all packages included!

Key Benefits

With the VibraTools Suite™ of software for MATLAB® your PC becomes a state-of-the-art system for noise and vibration, acoustics, structural dynamics, and environmental engineering (durability) analysis! By purchasing your license today, you can immediately increase your level of productivity and advance your understanding of key concepts thus allowing you to concentrate your efforts on solving acoustic or vibration related problems.

Feel the Power Feel the Power using the VibraTools Suite™ for analysis of noise and vibration assists in helping the student develop his or her ability to think and explore new avenues through 100% open script and clear algorithm implementation. **CLICK — Done!**

Efficiency Customer feedback has indicated that the use of scripts (MATLAB m-files) for data analysis automation of typical tasks offers out-

standing efficiency over classical approaches. With the VibraTools Suite™, you can use our large range of examples for assignments and lecturing. **CLICK — Done!**

Powerful Library The VibraTools™ software is shipped with a comprehensive library of samples showing many typical tasks, from entry-level to advanced, perfect for different levels of education. Our 3-day training program at your educational establishment will enable us to share our substantial experience and expertise with you, accelerating your ability to maximize the power of VibraTools™ and MATLAB® in one, open source environment. **CLICK — Done!**
